

Hosting + Maintenance

Premium WordPress hosting, and a developer who checks your site every week.

TODAY

Shared hosting that exposes your site to security risks. No Git deployment, no caching, no anti-spam. Updates skipped, or done in a hurry. You hear the site is down from a customer.

AFTER

WordPress hosting with caching and anti-spam. Changes tested first, then deployed through Git. A weekly check, a backup first, updates in quiet periods. I write to you first. If you write to me, I fix it the same day.

WHAT YOU GET

- Premium WordPress hosting: caching, anti-spam and Git deployment
- Weekly health check: error log, performance and updates, with a short report
- Backup, then update: tested first, in quiet periods
- Same-day fix: message me and I fix it the same day, and you get an error and solution report after each fix
- 5 development hours a month for smaller features or fixes. Maintenance and urgent fixes never use them
- A fixed rate for the year

WHO IT'S FOR

- Clients I built a site for: your first year is included, then it simply continues with the same person
- Owner-run sites: a working site and nobody to watch it
- Sites that grew: you want to move forward, not just keep it alive
- Sites on shared hosting: I move your site, test it, and switch over when it works

79 EUR/month, billed annually.

Backup first. Report every time.

Updates are tested before they touch your live site, and every fix is written up.

HOW IT WORKS

- Free call: tell me about your site and your hosting. 30 minutes, free.
- A quick look: I check your site, your host and what runs on it, then I send you an offer.
- Migration: I move the site, test everything on the new host, and switch over when it works. If I built your site, there is nothing to move.
- Weekly rhythm: every week I check the site, apply updates and send a short report.
- When something breaks: message me. I fix it the same day and send an error and solution report afterwards, so it does not come back.

HOW I WORK

- Backup before update: a backup comes first, and updates are tested before they go to your live site.
 - Report every time: a short weekly report, and an error and solution report after every fix.
 - Security first: WordPress hosting, anti-spam, no shared-server risks.
- Honest about limits: no site has 100% uptime and I will not promise it. I do promise that an error that gets noticed does not go unresolved.

PROOF

Excellence.rs is hosted and maintained this way, and so are my own sites. Studio Agnis stands behind the infrastructure and support.

NEXT STEP

A free 30-minute consultation.

Or email me for more information. I reply personally, usually within 24-hours
